

Software Development Company Trusted By 30+ Businesses Globally

Satvam In Brief

We are young, dynamic, ambitious, and very well prepared. Satvam Softwares (formerly known as Kalpavruksha Technologies) is a Private Limited Company founded in the year 2015 with the intention to explore the world of WEB. The Company started with only 2 people, but the efforts that we put on and the trust we gained over the years helped us to grow with number of employees.

With a forward-thinking mindset and creative solutions, we streamline workflows to drive organizational growth while maximizing resource efficiency. Each project, including its challenges, has shaped our expertise and refined our approach. We distinguish ourselves not just as a web services provider, but as your dedicated partner in digital success, committed to turning your web platform aspirations into reality.

Our Projects

Website for Value Home Properties

TYPO3 CMS jQuery Bootstrap

Successfully developed and deployed a dynamic real estate website for Value Homes using TYPO3 CMS. The website showcases an extensive property portfolio with advanced search functionality, detailed property listings, and an intuitive user interface. The implementation leverages TYPO3's robust content management capabilities to deliver seamless property updates and management while ensuring optimal performance and responsive design for all devices.

Apartments Bangalore

TYPO3 CMS jQuery Bootstrap

Engineered a sophisticated real estate portal for ApartmentsBangalore.com using TYPO3 CMS, featuring comprehensive property listings with advanced search filters and a revenue-generating banner advertisement system. The platform incorporates dynamic property management, automated listing updates, and a secure payment gateway for advertisement placements. The robust backend empowers real estate agents and property owners to manage their listings independently while providing an intuitive search experience for home seekers, resulting in increased user engagement and advertising revenue.

Property Management System

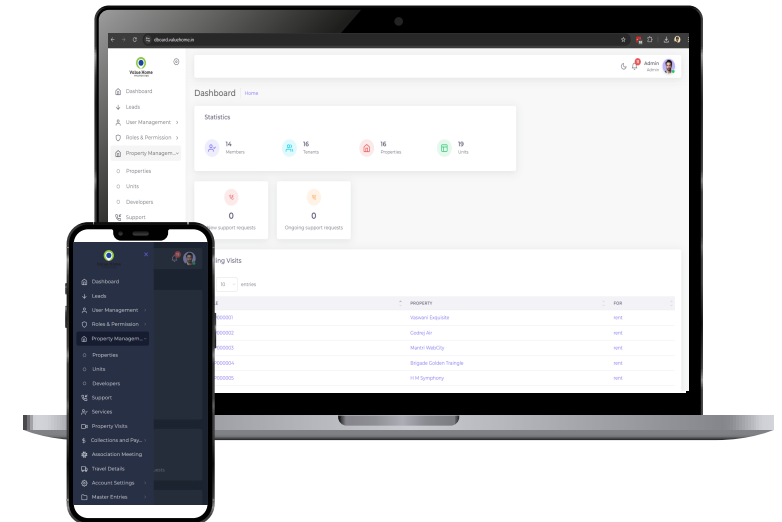

Php Laravel jQuery

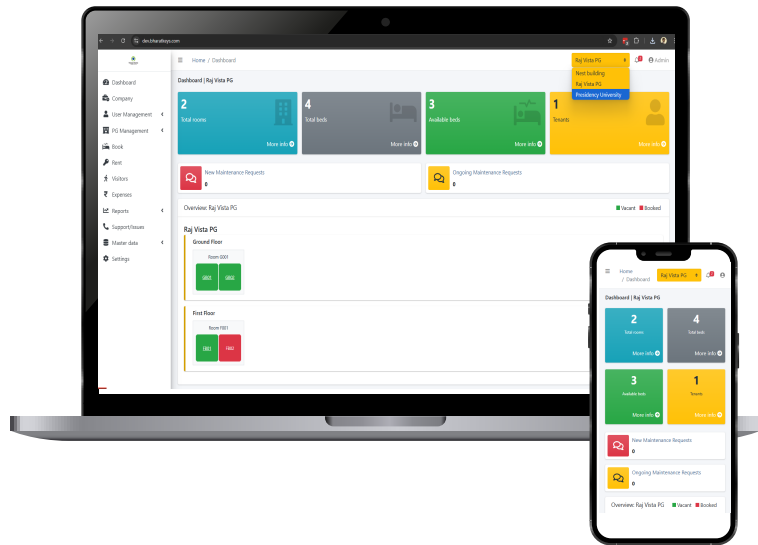

Designed and delivered a user-friendly property management solution that simplifies day-to-day operations for small to medium property owners. The system allows easy manual tracking of rent collections, property details, and tenant information through a clean, organized interface. Key features include customizable payment records, tenant profile management, and essential reporting tools. This straightforward solution helped property managers transition from spreadsheets to a centralized system, reducing documentation errors and improving record accuracy by 50%.

Advanced Property Management System

Php Laravel jQuery

Successfully developed and deployed a comprehensive property management solution using Laravel framework, streamlining operations for real estate businesses. The system features robust tenant management, rent collection, maintenance request tracking, and detailed financial reporting. With an intuitive dashboard and mobile-responsive design, property managers can effortlessly handle multiple properties, track payments, and generate insights in real-time. This solution resulted in 60% reduction in administrative tasks and improved tenant satisfaction through faster response times.

Paying Guest Management System

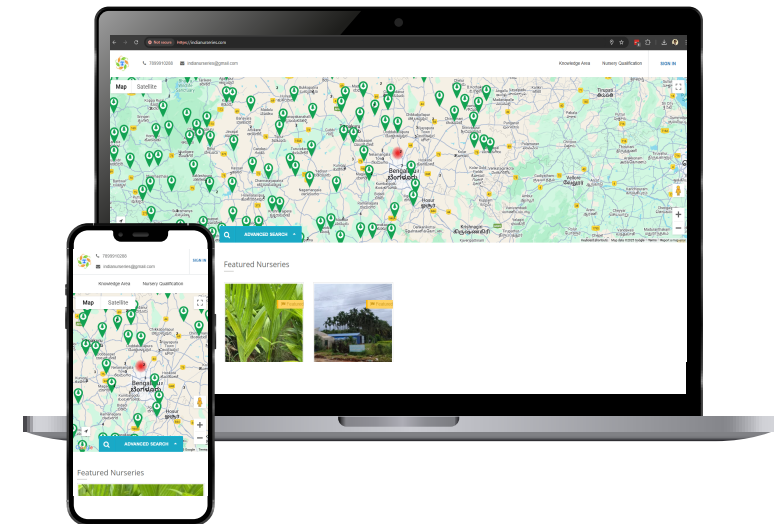

Php Laravel Bootstrap Vue js

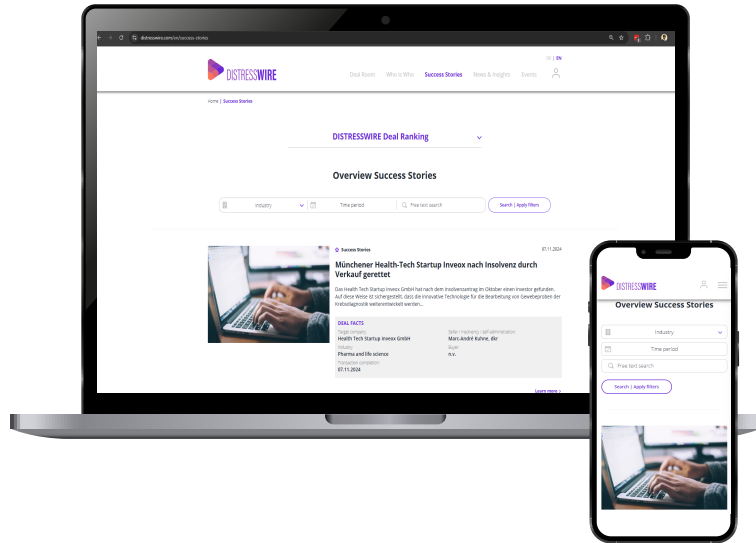

Developed a comprehensive Paying Guest Management System using Laravel, streamlining operations for multiple PG facilities through a centralized platform. The system features secure online payment processing, automated GST billing, real-time Aadhar verification, and detailed expense tracking. Key functionalities include visitor management, room allocation, tenant profiles, and comprehensive financial reporting. This scalable solution has significantly reduced administrative overhead while ensuring regulatory compliance and improving operational efficiency for PG owners.

Nurseries Directory

Php Wordpress jQuery

Engineered an intuitive WordPress-based directory platform showcasing nurseries with an interactive map interface. The website features location-based filtering, detailed nursery profiles with image galleries, and precise geolocation mapping. Custom integration of Google Maps API enables users to easily discover nearby nurseries while providing comprehensive business information, operating hours, and product specialties.

Distresswire

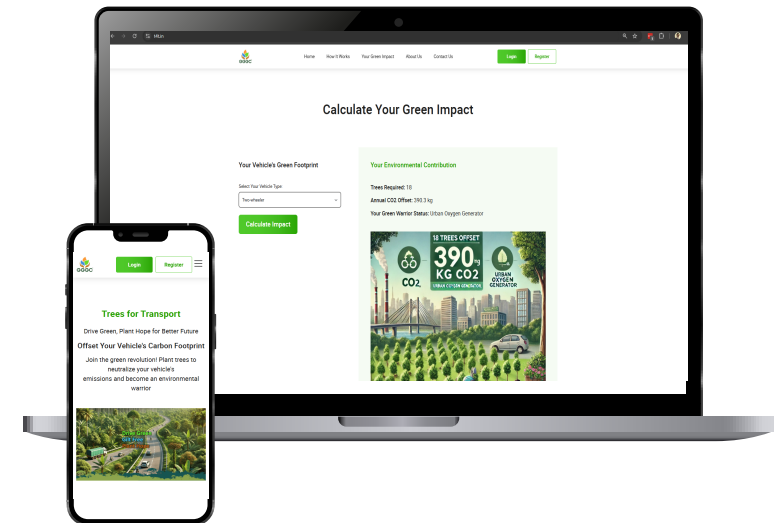

Php Laravel jQuery Flutter

We developed a sophisticated Laravel-based platform for DISTRESSWIRE that revolutionizes how investors and sellers connect in restructuring and insolvency scenarios. The application streamlines the entire process through intelligent automation, creating a seamless digital marketplace where stakeholders can efficiently manage distressed assets. By implementing robust security features, intuitive user interfaces, and automated matching algorithms, we helped DISTRESSWIRE transform traditionally complex insolvency transactions into straightforward, transparent digital workflows. The platform significantly reduces transaction time and costs while expanding market reach for both investors and sellers, making it a game-changing solution in the restructuring industry.

Trees for Transport

Php Codeigniter jQuery

We developed an innovative environmental platform "Trees for Transport" using CodeIgniter framework that enables vehicle owners to offset their carbon footprint through tree plantation. The application features a seamless 5-step process: user registration with vehicle details, intelligent tree quantity calculation based on vehicle type, secure payment integration for contributions, automated "Green Warrior" certificate generation, and a GIS-enabled monitoring portal for tracking plantation progress. This user-friendly solution transforms individual environmental responsibility into measurable impact, making carbon offsetting accessible and transparent for every vehicle owner.
